Ld 2, As 1, Ag 1
10YR-2.5Y 3/2
lam - 0.5-1.5 mm
3, f, P, c
45% brown
40% black
10% grey

Where is the mlgc?

230
gc 1?
15mm (H 10mm)
Ld 3, As 1
10YR 3/2
not lam

looks like
a gc 1.

3mm (H 2mm)
Ld 3, As 1
2.5Y 3/2
lam - 0.3-1.2 mm
3, f, P, c
95% brown
5% grey
to black

vivianite

10mm
Ld 2, As 1, Ag 1
2.5Y 3/2
lam - 0.3-1.2 mm
1, f, P, c-d
95% brown
5% grey
to black

if this is the gc 1 of
a DE, why is it
laminated?

31
31
250
91 1mm
Ld 2, As 1, Ag 1
2.5Y 3/2

lam - 0.5-3.0 mm
3, f, P, c-d
90% brown
10% grey
to black

g 1s are thicker and more
distinct than in core G.
Does this indicate an eastern
source?
In general, section in core E
is thicker relative to core G.
Is this due to sediment focusing
from eastern source or reflect
only basin morphology?

260
31 0.8mm
31 0.5mm

10mm
vivianite

270
Ld 2, As 1, Ag 1
2.5Y 3/2
lam - 0.1-1.0 mm
1, f, P, c-d
100% brown
to grey
to black

In segment 4,
Ld 25 may be Ld 1
and Ld 35 may be Ld 2.
(probably not)

280
25mm (H 5mm at 281.7)

290
Ld 2, As 1, Ag 1
2.5Y 3/2
lam - 0.4-1.5 mm
3, f, P, c
90% brown
10% grey
to black

lam - 3, f, P, c
